

Questions and Responses for RFI – 2021-BT-01
January 11, 2021

1. Please elaborate on column G in the Functional Specifications Document. Are vendors expected to reference each specific requirement within the 22 pages of the RFI response?

Response: Yes, to the fullest extent possible. Sections of the response as opposed to actual page numbers will be accepted; this requirement will be reviewed before a formal RFP is released.

- a. If yes, please elaborate how content should be converted to this extent? **See above.**
 - b. If no, please elaborate expectations for column G? **See above.**
2. In requirement 2.4 of the Functional Specifications Document, can you provide further detail on the types of images and data that would need to be exported from the software? Can you provide further clarification surrounding the functionality requirements for exporting the GIS data?

Response: The purpose of this spec is for data analysis and reporting; for example, BT produces a quarterly report for FTA on excessive travel time. BT need be able to export data related to the route taken, pickup/drop-off locations, times, vehicle, etc. Generally this GIS data should be available as latitude and longitude to 6 decimal places; more information will be proved in a formal RFP.

3. In requirement 5.6 it states that the dispatching screen must be kept up to date without refreshing. Can you clarify which components of the dispatching screen should be kept up to date?

Response: Specification 5.6 states; The system shall keep the information on the dispatching screen up to date without the need for the user to refresh the page

The purpose here was that the screen would refresh the items listed in 5.5 without user intervention as changes occur or based on a set interval.
